### H2020 SC1-DTH-02-2020 – health care provider sought

“QUOTE

📄 by **Kathrin Rüegg (CH00917) - Active** » 08 Oct 2019, 09:01

Dear colleagues,

A Swiss company together with already identified partners is planning to apply for the H2020 Call SC1-DTH-02-2020 Personalized early risk prediction and intervention based on Artificial Intelligence and Big Data Technologies.

Call opening: 19 November 2019

Call deadline: 22 April 2020

The consortium is looking for further partners (health care providers in Oncology, Parkinson's, Cardiology, Multiple Sclerosis, Geriatrics and other areas where fatigue is considered an important symptom) and a coordinator.

This Swiss company can objectively measure levels of fatigue from pulse wave signals collected on a phone camera lens then transmitted and calculated automatically on a server. It now seeks partners in health care to define treatment use for the H2020 Call SC1-DTH-02-2020.

#### Summary

Monitoring levels of fatigue is useful and under-utilized in health care. Current use of questionnaires is subjective and difficult to implement.

A Swiss SME seeks to validate these digital diagnostics and identify optimal ways to integrate these tools to improve patient outcome through Horizon 2020 Digital Transformation of Health Care.

Partners are health care providers across multiple health care systems and treatments. Several partners will specialize in health care consultancy.

#### Requested Partner

European health care providers

### Summary

A Basque research centre is working on an interdisciplinary project combining soft-matter physics and biology. This project aims at developing a new technology employing "soft nanopores" through which to refold proteins and disaggregate protein clusters. The center seeks companies interested in the application of the technology or in further developing their own soft-pore technology under a proposal for the H2020-FETOPEN-2018-2020 call.

### Description

Proper folding is essential for active proteins to exert their function in biological systems. Protein misfolding of recombinant proteins is one of the major bottlenecks in intensive, industrial scale production of therapeutic proteins. Misfolded proteins and their aggregates pose a problem both when present in the human body and after recombinant protein synthesis. Accumulation of misfolded proteins in the body is the basis of many diseases, such as Alzheimer's and Parkinson's diseases. They also limit the yields obtained from recombinant protein synthesis, and reduce the batch' purity. Thus, there is a need for protein purification, where these malformed proteins and their aggregates are filtered from their properly folded counterparts.

## Standard questions

What kind of cooperation are you looking for? \*

600 characters left

Please indicate what you can offer to other organisations/companies to help them further their activities and/or what you would like to gain in order to further your organisation/company activity. (Max. 600 characters)

Which information is missing or unclear? \*

600 characters left

Please provide detailed information about what is missing or unclear from the profile that you would like to make an expression of interest for. You will receive much faster feedback and improved your chances of securing an agreement with the more information that you provide. (Max. 600 characters)

Some facts about your company \*

600 characters left

Please include any supporting information about your company. Include information such as: Type of your organisation, year founded, size and if you are already engaged in cross border agreements. (Max. 600 characters)
